POND DIP SCORES

2025

# STOCKLEY PARK

## Freshwater Habitats Trust Pond dip

- Provides a score of the pond based on the type of invertebrates found in the pond
- Pond dips help focus management to help improve the pond as a habitat
- This map shows recent pond dip locations

| Totals                                                                                                             | 18     |                                                    | 38     |                                                                                        | 33     |                                      | 22     |                                                      | 33     |                                                                      | 37     |                                              | 17     |
| Small pond steep sides with overhang, limited access for wildlife but Smooth Newts present. Good invert abundances |        | Very low abundances of inverts. Large fish present |        | Good adult Odonata activity - Large Red Damselfly, Azure Blue, Blue Tailed, Demoiselle |        | Deep and steep sided, low abundances |        | Shallow graduated bank southern edge shaded by trees |        | Northern section with bog area botanically diverse and shallow zones |        | Partially drained down, upper part fully dry |        |

**Score: 1-5** The pond could be better

**Score: 6-30** Your pond is good

**Score: 31-60** Your pond is brilliant
